

CURRICULUM FOR EXCELLENCE

Interdisciplinary Learning: Maths and Language

The Modern Languages Assistants helped to translate Maths “problems” into German with the raw material provided by Maths staff.

Groups of 3 or 4 students solve Maths problems which have been presented to them in French and German. The groups consist of at least one French and one German speaking pupil and someone who is not studying a language. They work together to decipher the meaning of the words and then try to answer the questions.
